

L.O.T To explain the differences in why a place flooded.

Boscastle, United Kingdom, Drainage basin flooding

The location of the village, within the Valency valley.

The steep valley sides ensured a high amount of surface run-off.

It rained and the banks burst. The rain came from the top of the hill and made a flood come down. The rescue helicopters came to rescue people and it was really bad. Now Boscastle is nice and clean and I'm sure it will never happen again.
